

Job Title: Graduate Engineer - Enterprise AI Solutions

Base Location: Gurugram

Work Location: Work From Office – 5 Days a Week

Job Type: Full-Time

Experience Level: Freshers / 0–1 Year

Target Colleges: Reputed Engineering Colleges (B.Tech / B.E.)

Job Summary:

We are looking for a sharp, communicative, and technically minded Junior Technical Consultant to join our Enterprise AI Solutions practice. In this customer-facing role, you will work directly with enterprise clients to understand their business challenges and help implement end-to-end AI solutions. This involves working with Large Language Models (LLMs), Small Language Models (SLMs), Retrieval-Augmented Generation (RAG) architectures, and AI orchestration frameworks deployed on leading cloud platforms. This is a unique role at the intersection of technology and business — ideal for graduates who can think analytically, communicate clearly with non-technical stakeholders, and learn AI technologies rapidly.

Key Responsibilities:

Customer Engagement & Discovery

- Engage directly with enterprise customers to understand their business processes, operational pain points, and strategic AI adoption goals.
- Conduct structured discovery workshops and requirement-gathering sessions with business and IT stakeholders.
- Assess client data readiness, infrastructure maturity, and AI tooling landscape prior to solution design.
- Translate complex business requirements into clear, actionable AI solution blueprints.
- Manage client communication throughout the project lifecycle — from initial scoping through to delivery and post-go-live handover.

Enterprise AI Solution Implementation

- Implement end-to-end enterprise AI solutions leveraging LLMs (GPT-4, Anthropic Claude, Google Gemini) and SLMs (Microsoft Phi, Mistral, LLaMA) selected based on client use case and infrastructure constraints.
- Design and deploy Retrieval-Augmented Generation (RAG) architectures connecting LLMs to enterprise knowledge bases, document repositories, and structured data sources.
- Configure and deploy enterprise AI platforms such as Microsoft Azure OpenAI Service, AWS Bedrock, and Google Vertex AI.
- Implement AI orchestration workflows using LangChain, LlamaIndex, or Microsoft Semantic Kernel to build multi-agent and multi-step AI reasoning pipelines.

Registered Office: 508, Main Road, Gandhi Colony, Muzaffarnagar, Uttar Pradesh, - 251001

Business Office(s): 117, 125, 126, AltF, Suncity Success Tower, Golf Course Ext. Road, Sector 65, Gurugram, Haryana - 122101
101-105, 126-131, AltF, Suncity Success Tower, Golf Course Ext. Road, Sector 65, Gurugram, Haryana - 122101

eMail: people@engineo.solutions

- Integrate AI solutions with enterprise systems including CRM, ERP, HRMS, and internal portals via APIs and platform connectors.
- Support model selection decisions — evaluating trade-offs between LLMs and SLMs based on latency, cost, data privacy, and performance requirements.

Proof of Concept (POC) & Solution Design

- Design, build, and present AI-powered Proof of Concepts tailored to specific client use cases such as enterprise search, document intelligence, customer support automation, and knowledge management.
- Demonstrate AI solution capabilities through live demos and walkthroughs for both technical and executive stakeholder audiences.
- Contribute to solution architecture documents, technical proposals, and implementation roadmaps for client engagements.

Deployment, Enablement & Support

- Support full deployment of AI solutions in customer environments — cloud or on-premise — ensuring reliability, security, and scalability.
- Develop user training materials and conduct training sessions to enable customer teams on deployed AI tools and platforms.
- Provide post-go-live hypercare support and troubleshoot AI solution issues in production environments.
- Document solution architecture, configuration decisions, and runbooks to ensure long-term client self-sufficiency.

Innovation & Knowledge Sharing

- Continuously track developments in the enterprise AI landscape — new model releases, orchestration tools, and cloud platform capabilities.
- Contribute to internal capability-building through knowledge-sharing sessions, reusable solution assets, and best practice documentation.
- Support presales activities including RFP responses, solution demos, and technical scoping exercises.

Qualifications & Experience:

Education & Technical Skills

- B.Tech / B.E. in Computer Science, Information Technology, Electronics, or a related engineering discipline.
- Basic programming ability in Python for scripting, API calls, and prototyping AI solutions.
- Foundational understanding of AI/ML concepts — how LLMs and SLMs work, transformer architectures, embeddings, and prompt engineering.
- Logical problem-solving mindset with the ability to structure ambiguous business problems into solvable technical tasks.

Good to Have

eMail: people@engineo.solutions

- Hands-on exposure to any LLM platform: Azure OpenAI, AWS Bedrock, Google Vertex AI, or OpenAI API (personal projects, internships, or coursework accepted).
- Familiarity with RAG concepts and vector databases (Pinecone, Chroma, Weaviate, FAISS).
- Basic knowledge of AI orchestration using LangChain, LlamaIndex, or Microsoft Semantic Kernel.
- Understanding of SLM use cases — when to deploy smaller, fine-tuned models versus large cloud-hosted LLMs.
- Awareness of enterprise AI governance, responsible AI practices, and data privacy considerations.
- Certifications or courses in AI/ML, cloud platforms (Azure AI, AWS, GCP), or prompt engineering are a plus.

Soft Skills

- Confident and professional communicator — comfortable leading client discussions and executive presentations.
- Strong verbal and written communication skills with the ability to explain technical concepts to non-technical audiences.
- Highly organised with strong time management across multiple concurrent client engagements.
- Curiosity-driven learner who proactively stays ahead of the rapidly evolving AI landscape.
- Collaborative team player who works effectively with solution architects, engineers, and account managers.
